

Science:
Today we are recapping...

Basic Needs

Imagine that you have been chosen to lead a mission into space.

You are going to be all alone for two weeks, while you rocket towards the Moon.
What do you need to take with you to keep yourself happy and healthy?

Think of three things that you would like to take.

1...

2...

3...

What did you decide to take with you?

Do you need these things to keep you alive?

There are many things that humans like to have to make their lives more enjoyable or more comfortable. But there are only a few things that we really need. Do you know what they are?

?

?

?

Air

Mammals, reptiles and birds breathe air through their nose or mouth into their lungs.

Fish and other sea creatures breathe under water through special organs called gills.

Water

Creatures that live on the land get water by drinking, and from the food that they eat.

Animals that live in water take in water by drinking, through their skin and from their food.

Food

All animals need to eat food to stay alive.

Some animals eat only other animals. These animals are carnivores.

Some animals eat only plants. These animals are herbivores.

Some animals eat animals and plants. These animals are omnivores.

For humans and most animals, shelter is very important too.

This keeps us safe from predators, gives us a place to rest and have young, and protects us from the getting wet, too hot or too cold.

Look at the table below. Write a sentence for each empty box using the sentences given to help you.

mammals, reptiles and birds
